

Dalla illuminazione pubblica alla Smart City: la ricerca europea e gli approcci applicativi

Mauro Annunziato
Coordinatore Smart Cities ed Ecoindustria

Città sostenibili

Smart City : sostenibilità a 360°

SMART ECONOMY

*Development of innovative spirit
Ability to transform
Eco-industry
ICT-infrastructures
Alternative economy*

Smart Economy

SMART MOBILITY

*Local accessibility & Info-mobility
Zero-carbon vehicles – city car
Green biking
Mobility on-demand
Sustainable and safe public transport systems
Urban sensor network*

Smart Mobility

SMART ENVIRONMENT

*Smart urban landscape
Attractiveness of natural conditions
Pollution
Environmental protection
Green area*

Smart Environment

SMART PARTECIPATION

*Development of the cultural identity
Social interaction & communication
Access to the Cultural facilities
Touristic attractiveness
Individual/Social Creativity
Inclusion and ethnic plurality
Cosmopolitanism / Open-mindedness
Participation in public life & decision-making*

Smart Participation

Smart integration

Smart Energy

SMART LIVING

*Health conditions
Individual safety
Housing quality
Education facilities*

Smart Living

SMART ENERGY

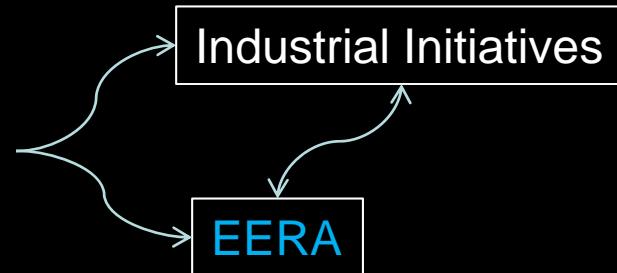

*Green energy
Energy efficiency
Diffused energy and self-production
Ecobuildings and power parks
Sustainable resource management
Efficient public lighting*

SET PLAN (Strategic Energy Technology Plan)

Budget stimato (UE + Paesi Membri + Industria)
per il periodo 2010-2020

| Ell end Joint Undertakings | Budget totale pubblico&privato [mld Euro] |
|-------------------------------|---|
| Solar (fotovoltaico+termico) | 16 |
| Wind | 6 |
| Grid | 2 |
| CCS | 11-16 |
| Bioenergy | 9 |
| Sustainable Nuclear (fission) | 5-10 |
| Smart Cities | 10-12 |
| Hydrogen and Fuel Cells | 5-6 |
| Fusion for Energy | 10-11 (?) |
| Totale | 74-88 |

Articolazione del SET PLAN

European Energy Research Alliance Smart City

27 paesi europei – delegati di team nazionali

Obiettivi immediati

- Mappatura delle attività di ricerca e sviluppo in Europa sulla smart city
- Definizione delle articolazioni principali della ricerca

Obiettivo strategico: Preparare un joint Program su Smart City entro fine 2011

Network Italiano – EERA Smart City

Università ed istituti di ricerca

ENEA (coordinatore)

CNR

Univ. Roma Tre

Politecnico di Torino

Università di Pisa

Università di Siena

Univ. Roma La Sapienza

Univ. Ancona

Fondazione Bordoni

Univ. Genova

Politecnico Bari

Aziende

ENEL

Telecom

Loccioni

Ericsson

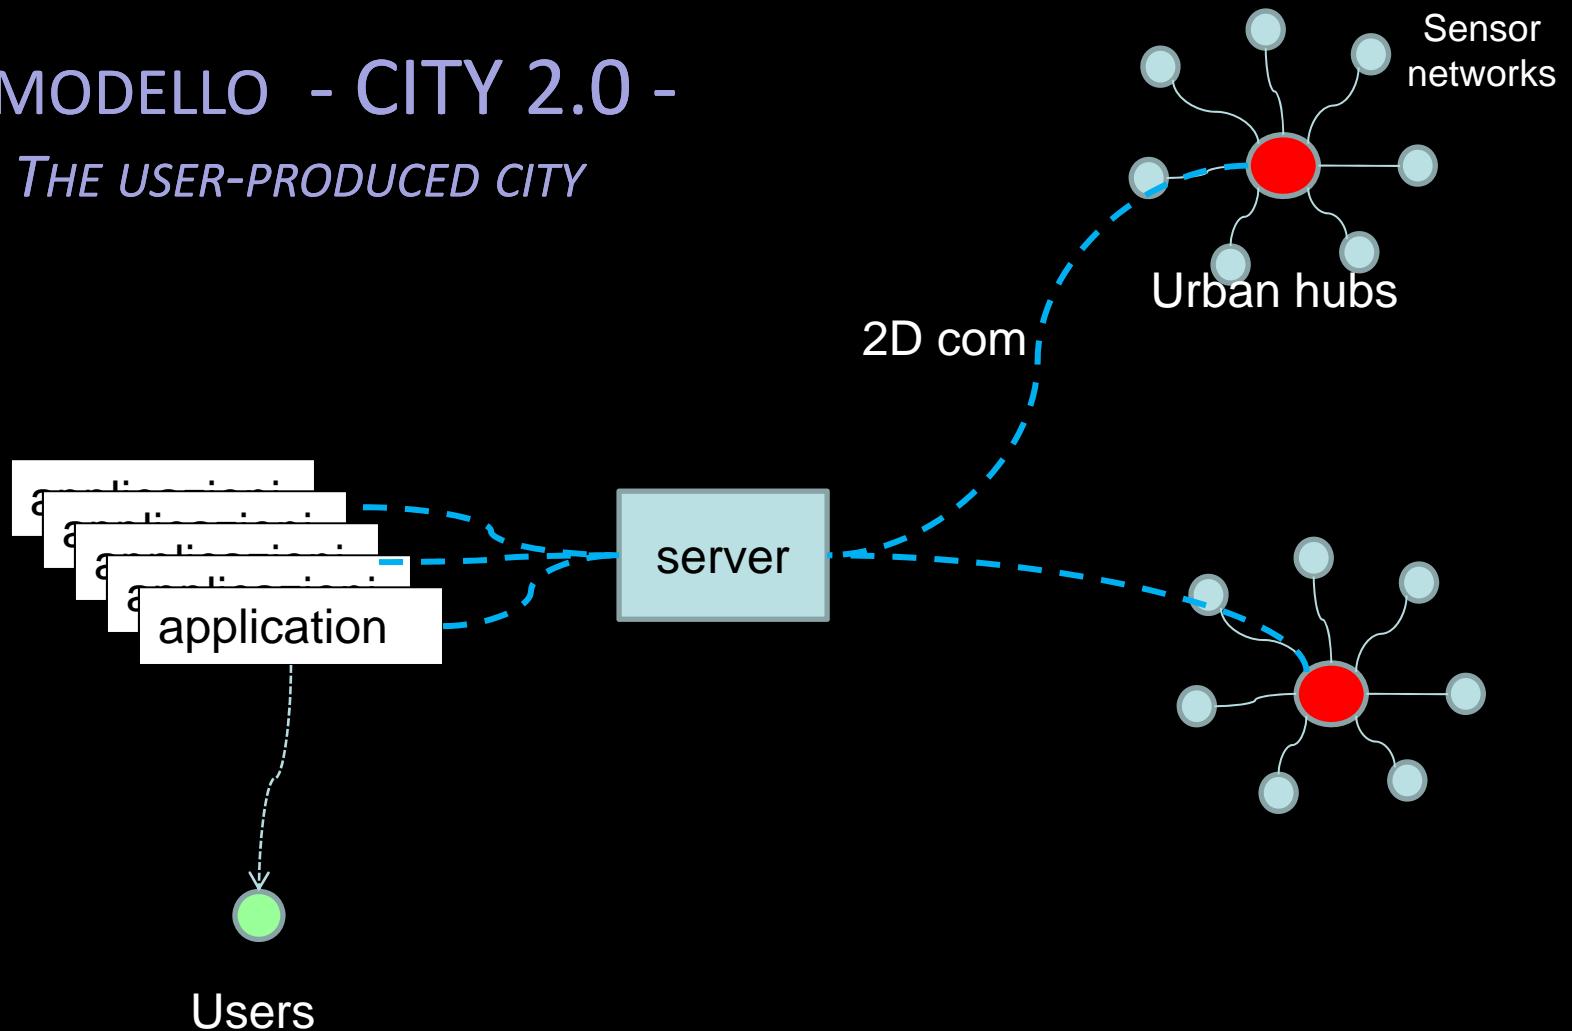

EERA Smart City Sub-Programs

- ENERGY IN CITIES (coordinamento AIT, Austria)
- URBAN ENERGY NETWORKS (coordinamento ENEA, Italia)
- INTERACTIVE BUILDINGS (coordinamento LNEG, Francia)
- URBAN CITY RELATED SUPPLY TECHNOLOGIES (coordinamento TNO, Olanda)

Urban space network integration

IL MODELLO - CITY 2.0 -

THE USER-PRODUCED CITY

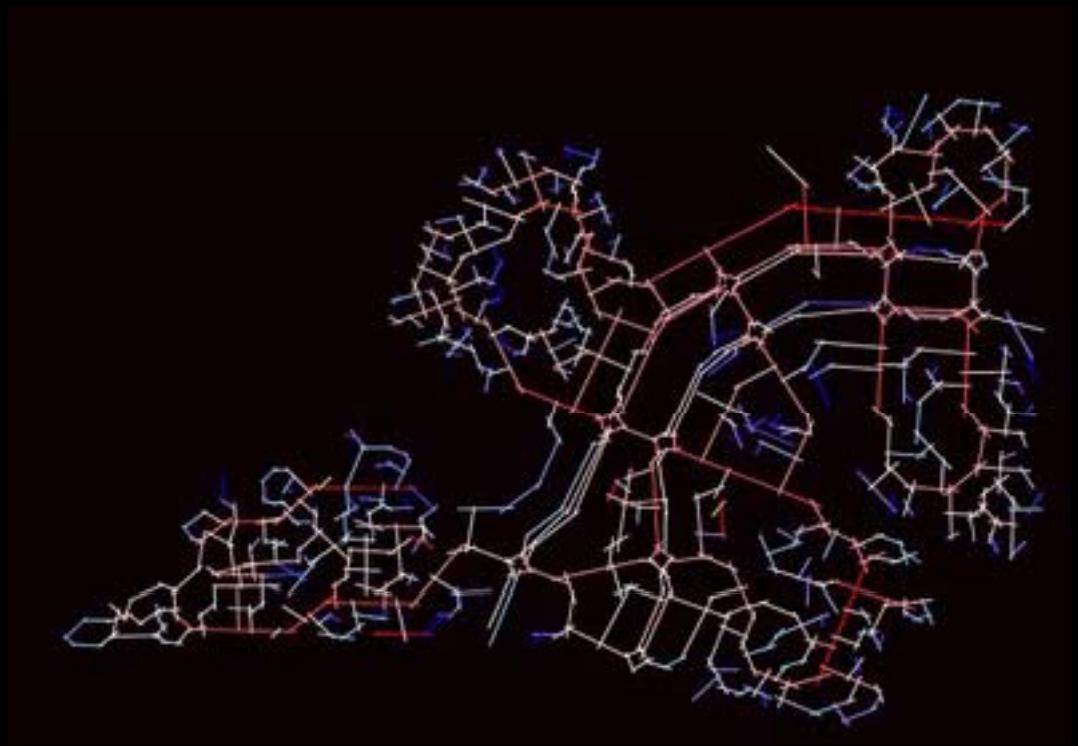

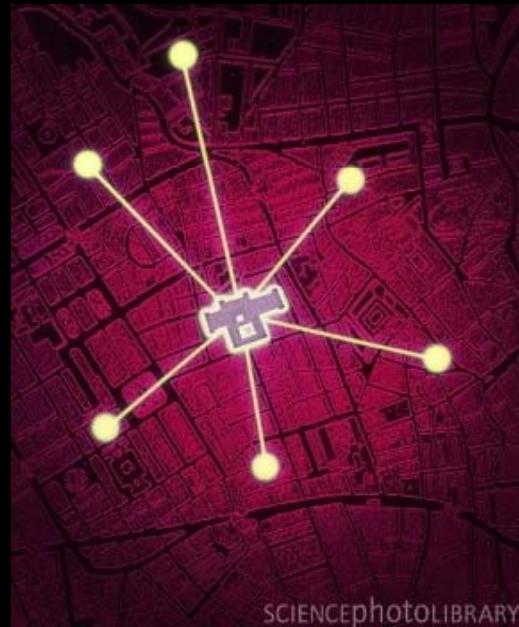

Urban space network integration

Urban scale network integration (lighting, water, waste, envir, safety, com)

Energy-mobility network integration

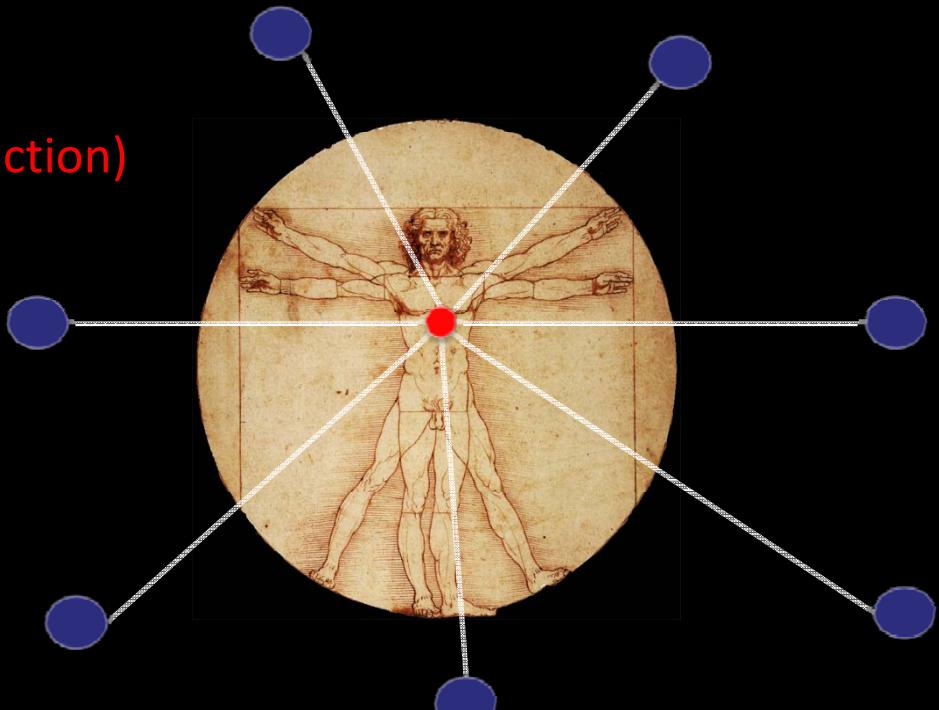

Remote management of building city clusters

Human factors: the citizen-city interaction

Citizen-urban networks interaction

User-Grid Interface (building interaction)

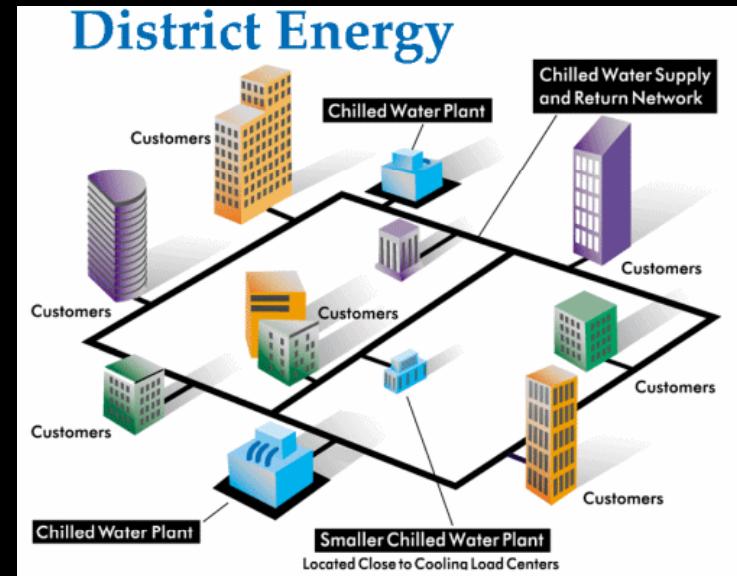

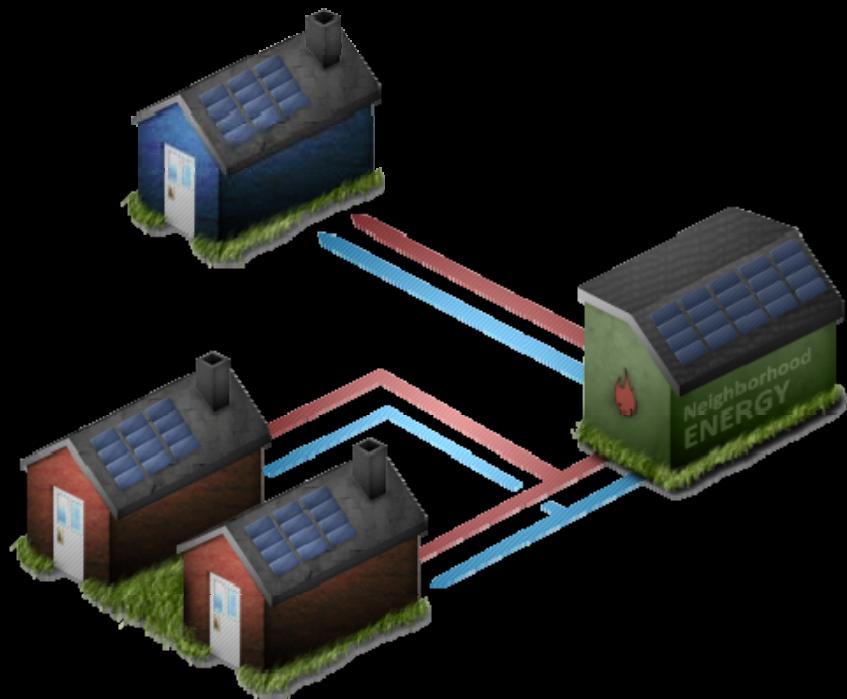

KEY CONCEPT:
THE HUMAN ORIENTED TECHNOLOGY

Smart Energy Districts

1.1 Intra-building interactions

1.2 District heating and cooling

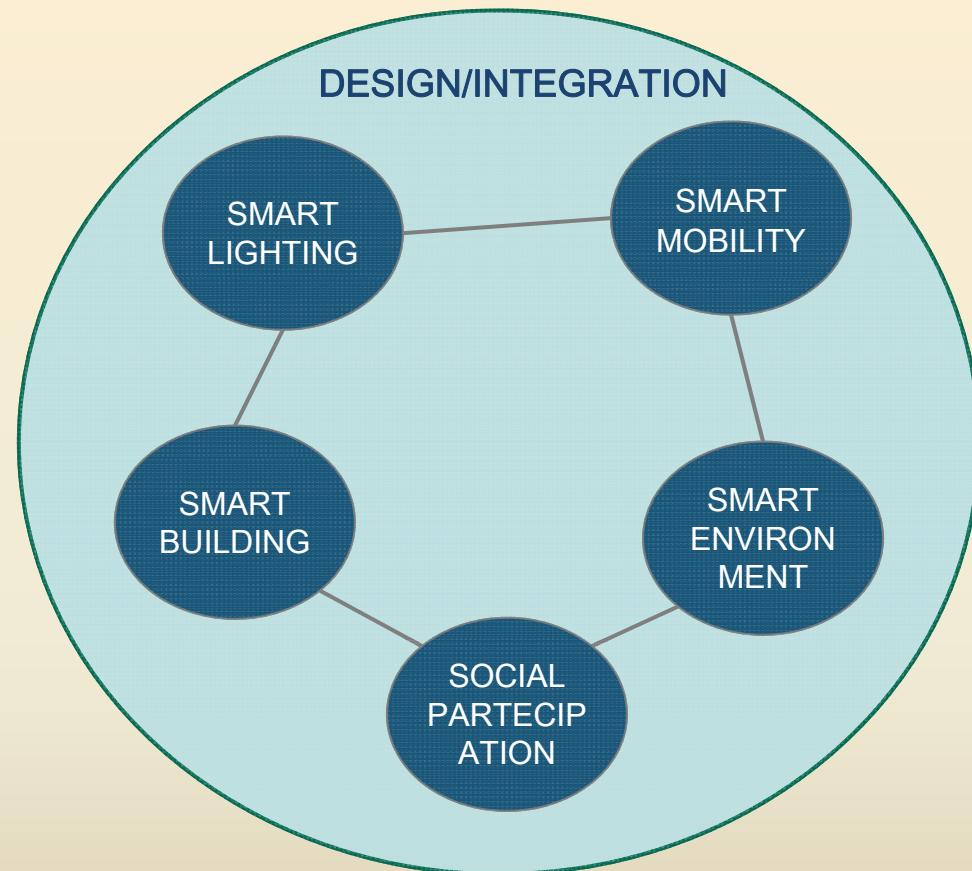

1.3 District integration of energy production and consumption

IL PROGRAMMA “SMART CITY” DELL’ENEA

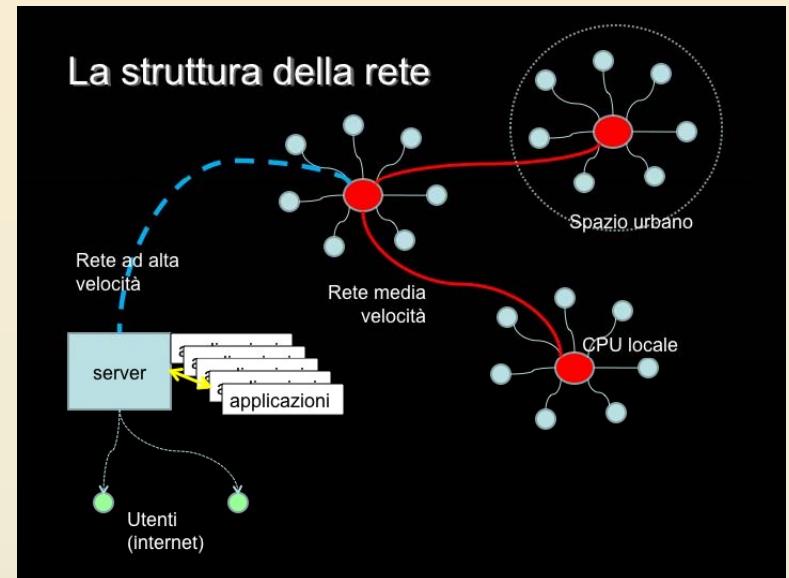

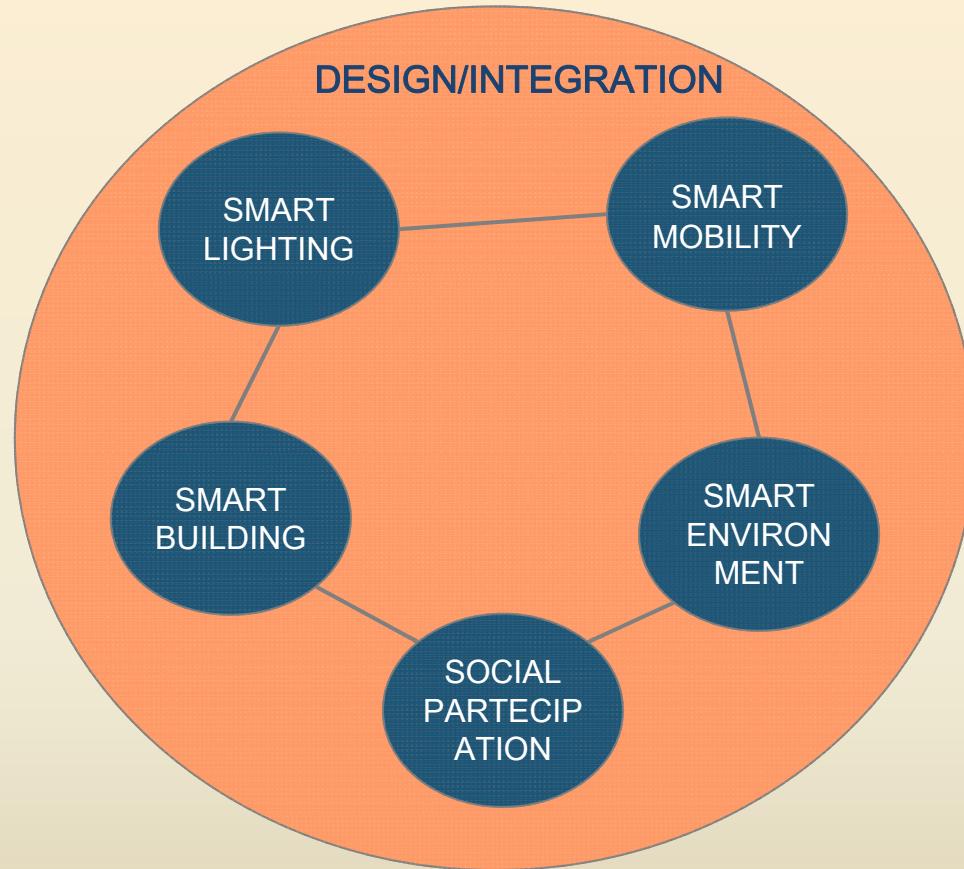

CITY 2.0: SVILUPPO TECNOLOGIA, DIMOSTRATIVO SU
SCALA URBANA, SPERIMENTAZIONE SMART TOWN

Il progetto CITY 2.0

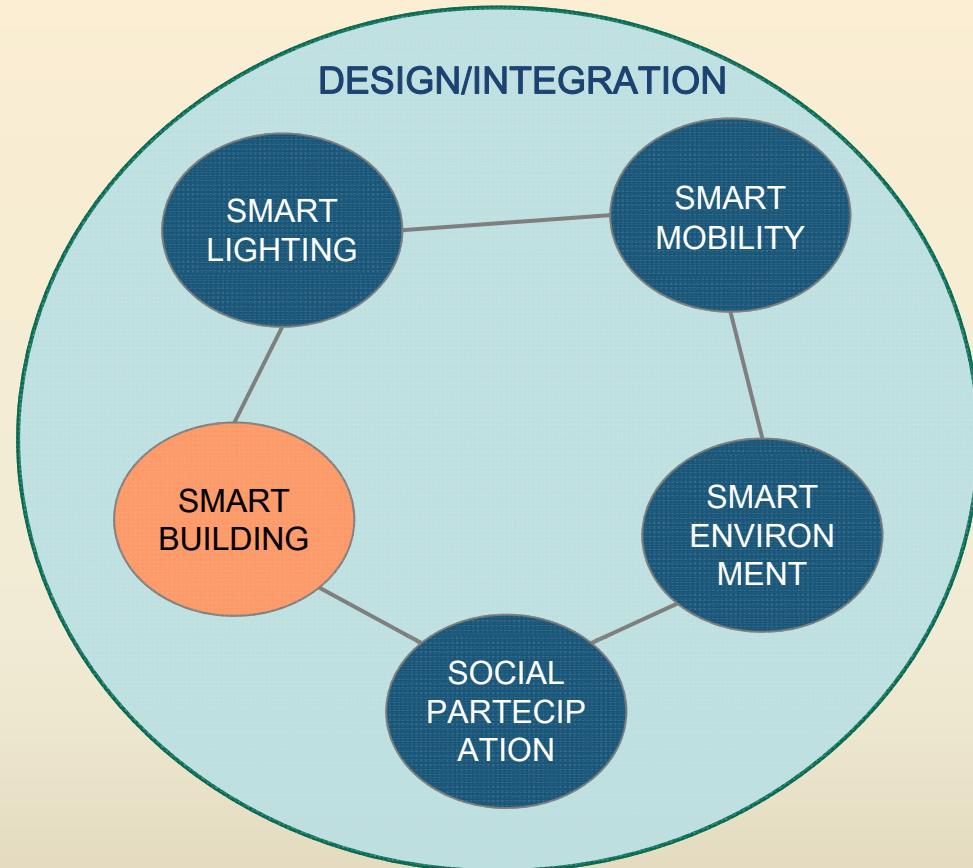

Sviluppo di un modello di *smart town* realizzabile e competitivo
anche su piccole città, realizzazione pilota

Piattaforma integrata aperta

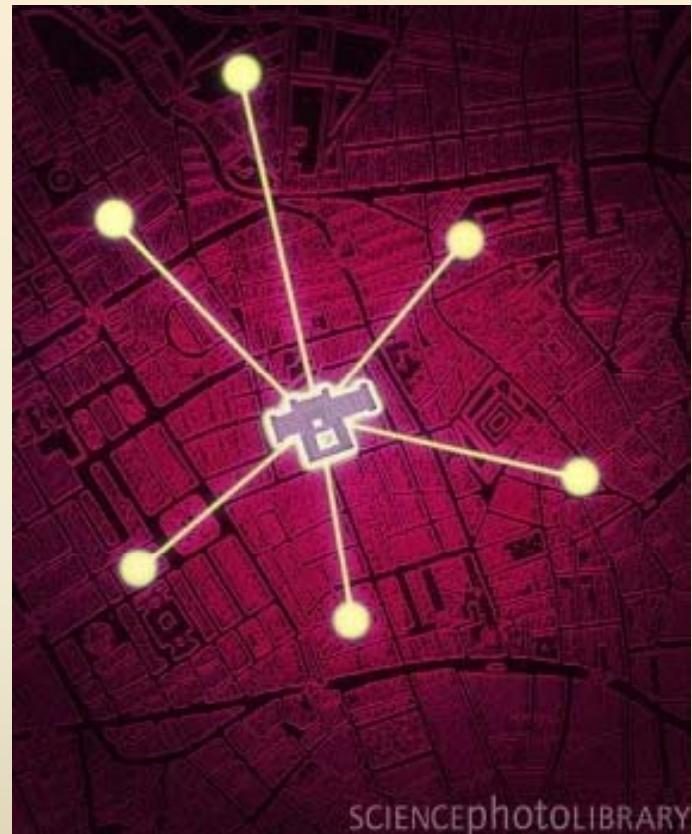

- Condivisione dei sensori/dati/applicazioni
- Progetto piattaforma integrata per Smart Town
- Framework prototipale

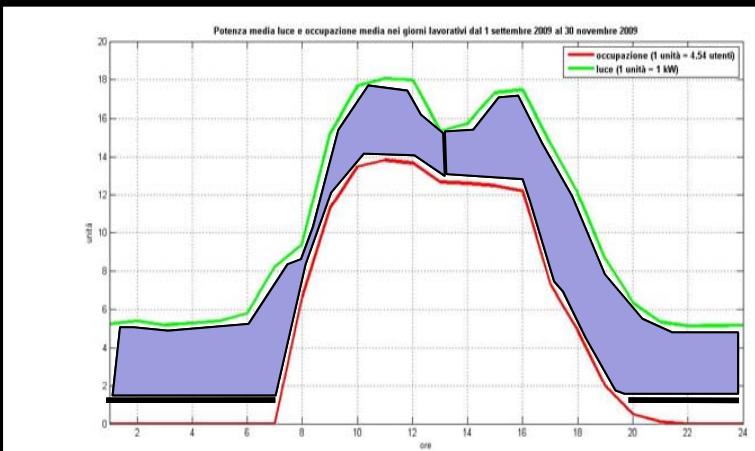

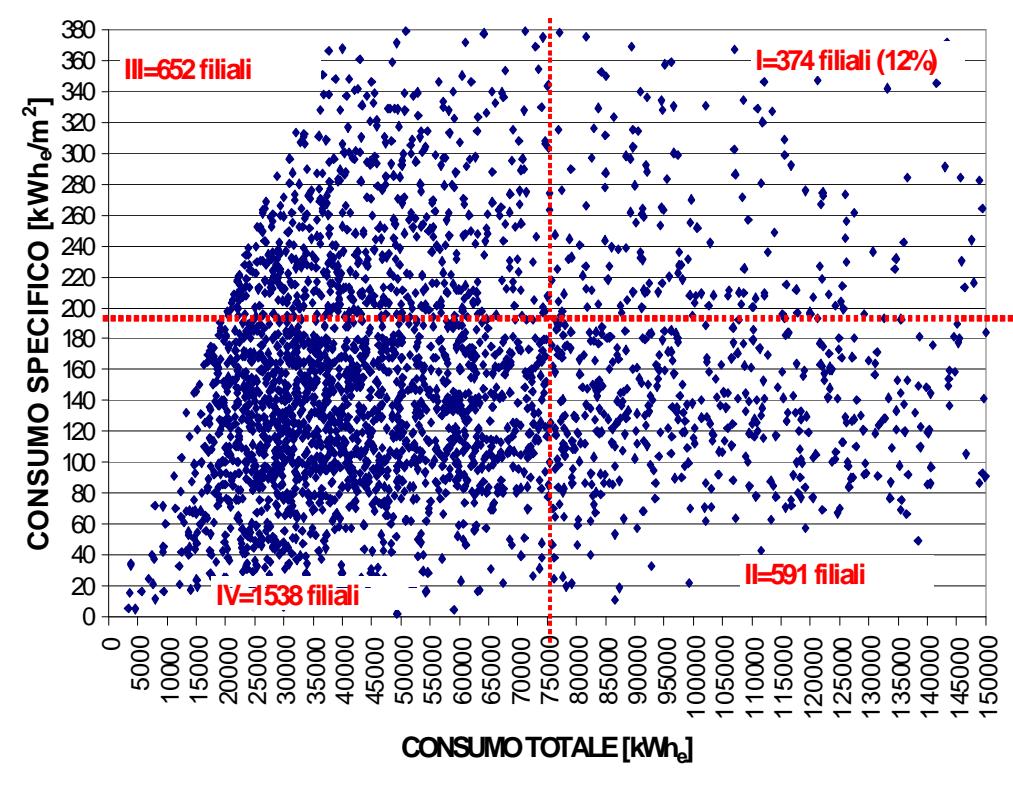

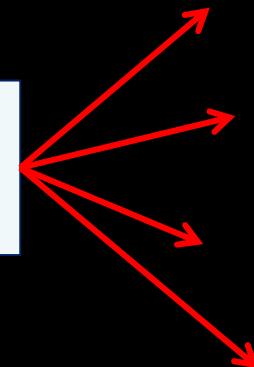

Smart Building Network

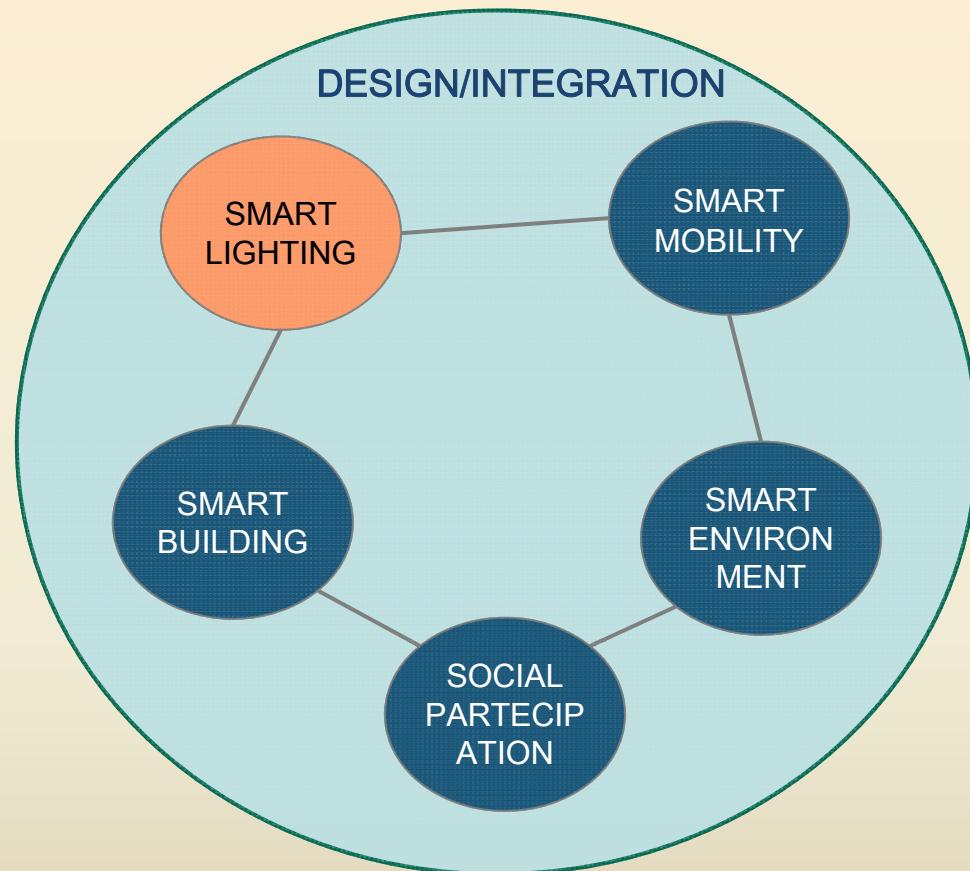

- Modelli predittivi della rete
- Interazione rete-edificio-utente

Dispersioni edifici tali da determinare forti margini di intervento (involtro/impianti)
 Guasti nei sensori che conducono a forti sprechi di energia
 Errata o non ottimale impostazione del sistema di gestione automatica
 Errati comportamenti umani

Smart Lighting

- Linee PLC per controllo remoto punto-punto
- Lampione intelligente - teste sensoriali
- Controllo adattivo potenza luminosa
- Risparmio energetico: 50 %, tempo ritorno: 5 anni

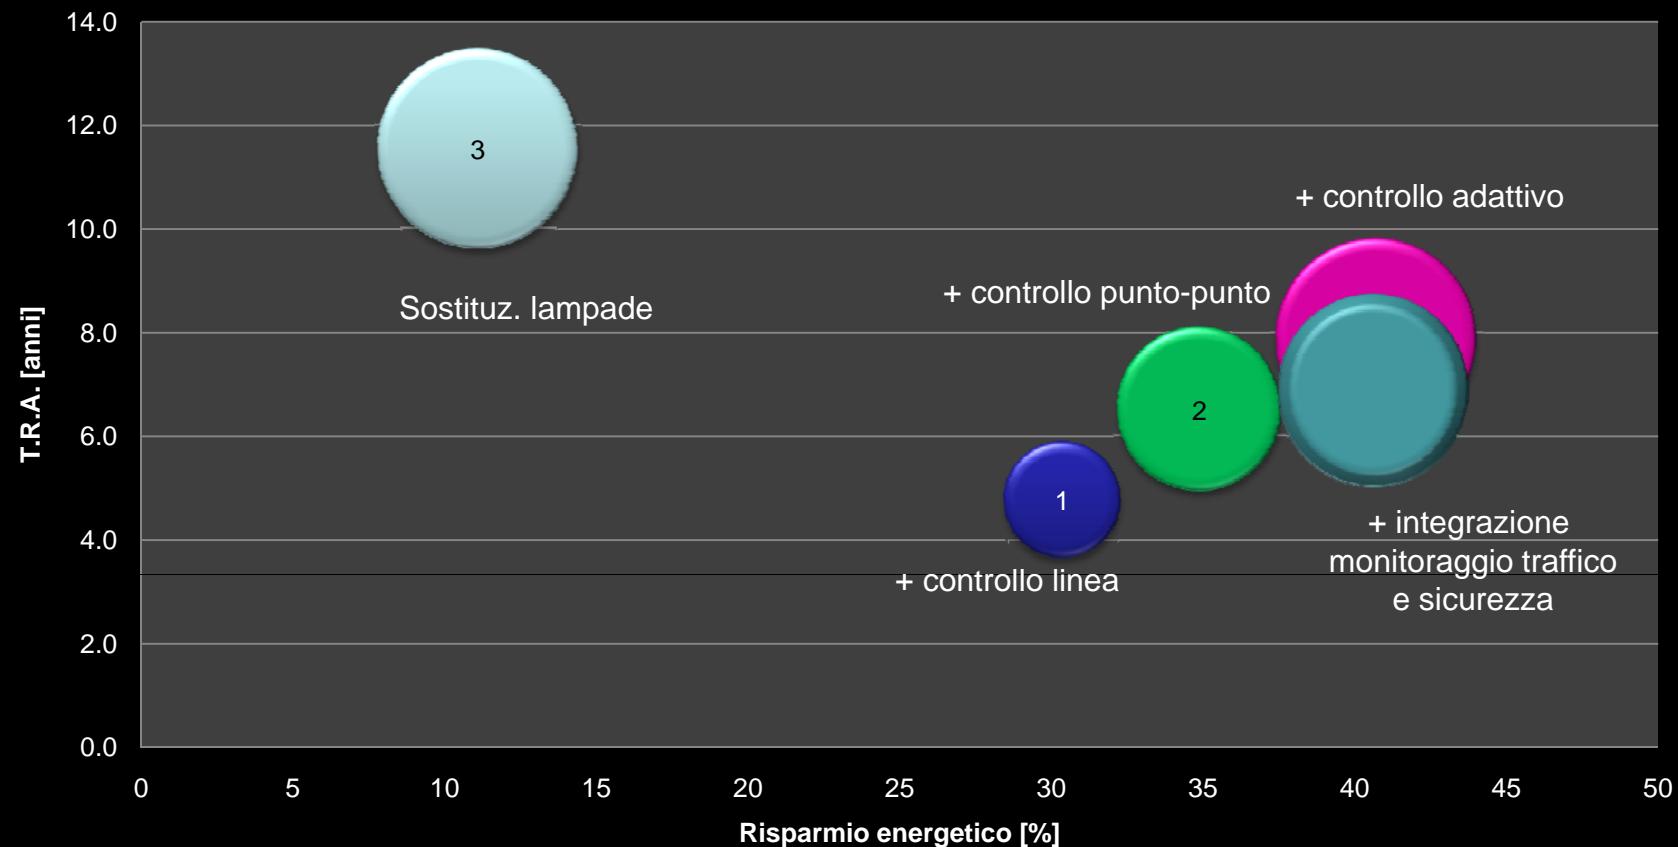

Analisi tecnico-economica di comparazione tra metodologie di gestione convenzionali e metodologie abilitanti

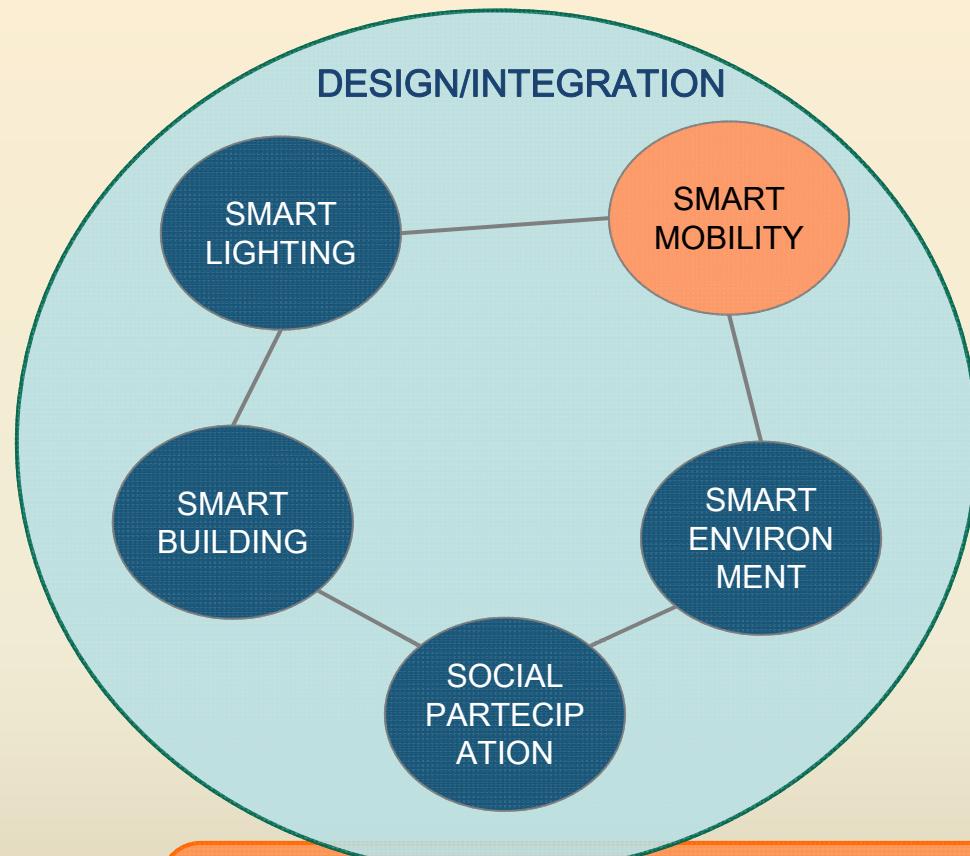

Analisi tecnico-economica di comparazione tra metodologie convenzionali e metodologie abilitanti (punto-punto PLC)

Confronto payback – risparmi su caso pilota Castelnuovo Magra (8000 ab.)

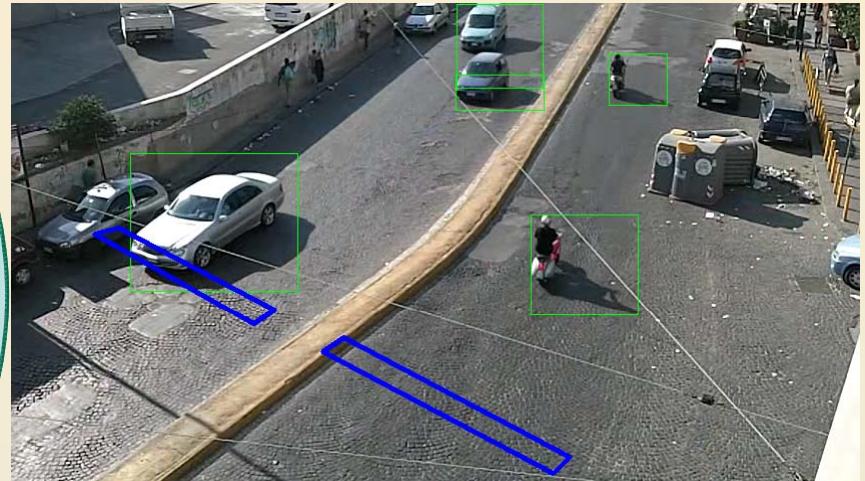

T.R.A. - Risparmio energetico - Livello di comfort

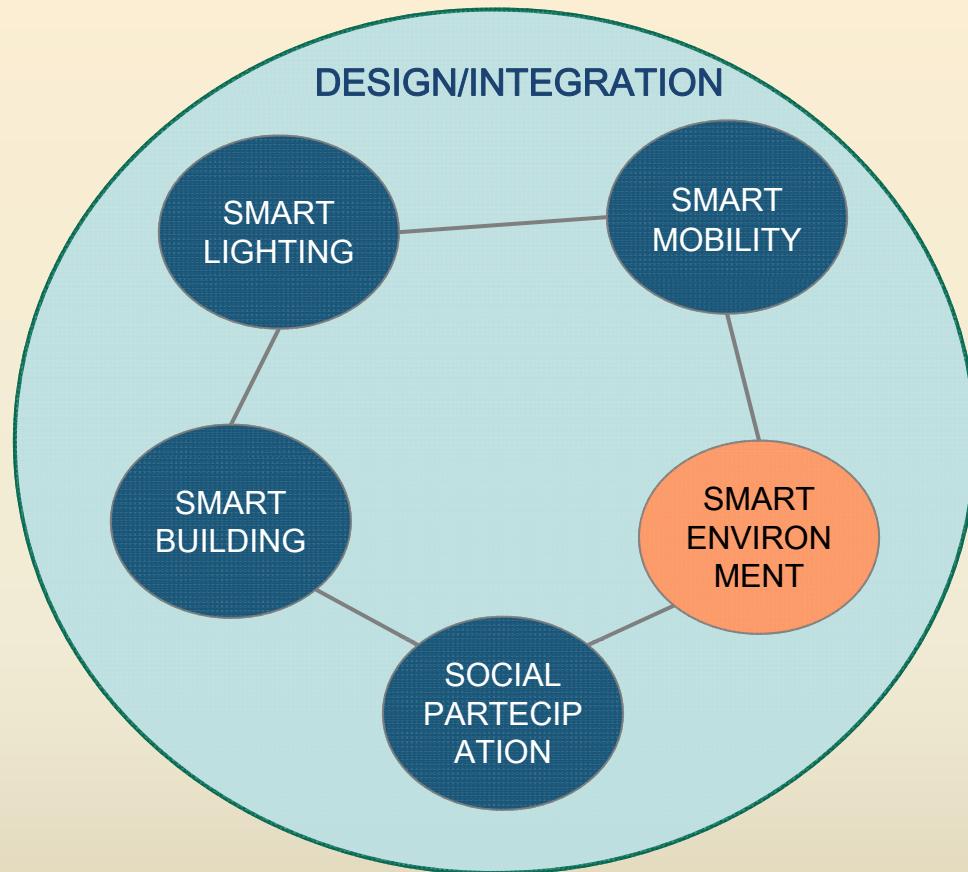

Smart mobility

- Tutor urbano low cost
- Interazione veicolo pubblico-semaforica
- Gestione remota veicolo elettrico

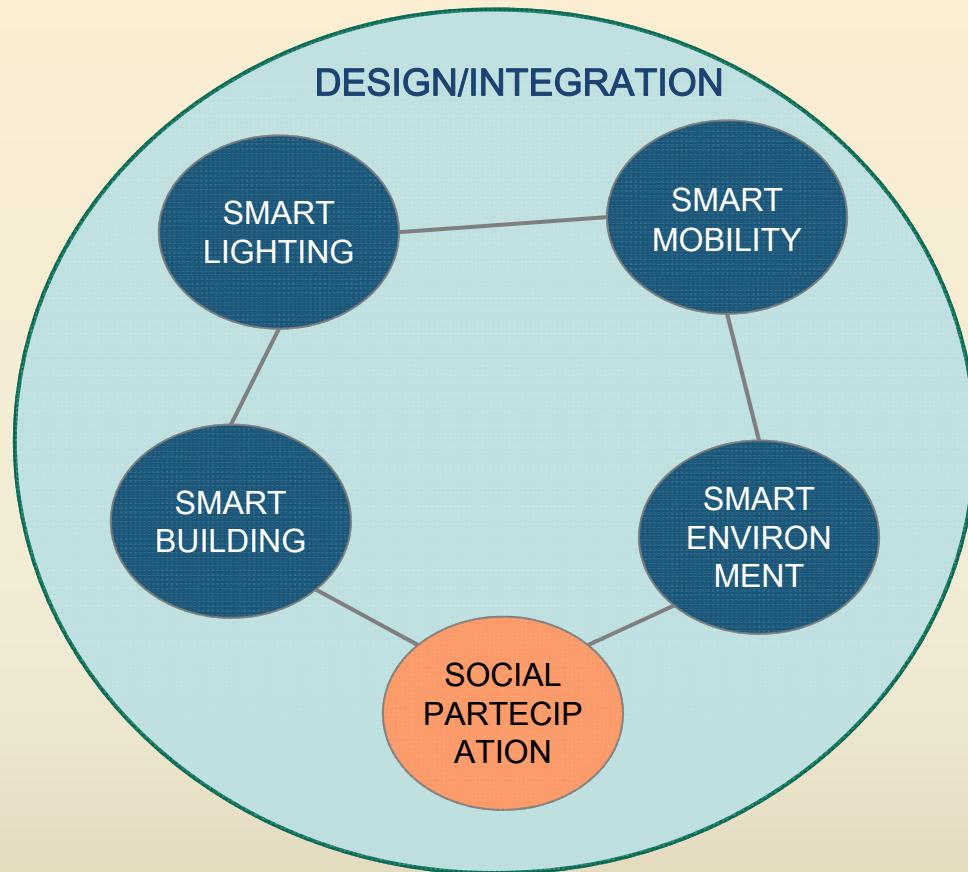

Smart Environment

- Sistemi diffusi, a basso costo, di monitoraggio della qualità dell'aria
- Modelli per comprendere la dispersione degli inquinanti nella città

Social participation

- Installazioni / social network urbani per beni culturali e creatività – “*la città ibrida*”
- Comunicazione tra cittadini (partecipazione alle decisioni, senso della comunità)
- Sicurezza, Informazione

Dimostrativo scala urbana

Lo **Smart Ring** a L'Aquila

Grazie per l'attenzione
